DEVELOPMENT PROCESS

OUR **PROCESS**

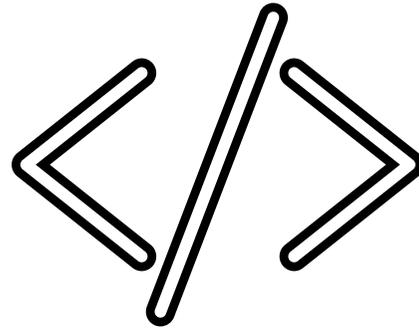

At **Achyut Labs**, we start by exploring the primary challenges for your business or industry to develop cutting-edge solutions through a strategic process where we will discover, plan, build, and launch a custom-tailored brand experience to grow your business.

Discovering the path before
embarking the journey.

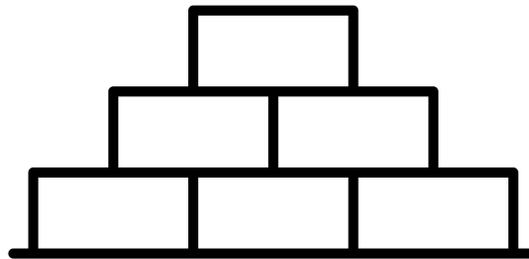

PLAN

We organize the tasks, and schedules and setting up your project management tools. The idea is to plan tasks using the user story process from the agile methodology.

CODE

Here our developers does code development and code review.
When the code is ready, they merge it.

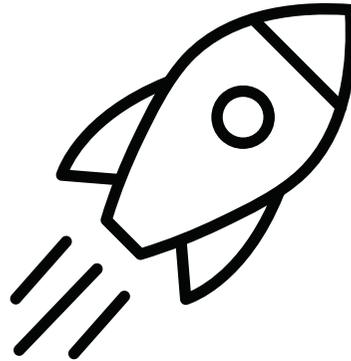

BUILD

This step is the first one toward automation. Our goal here is to build the source code into one desired format, compiling, testing, and deploying in a particular place of the infrastructure.

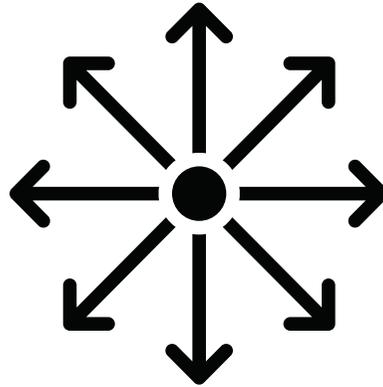

TEST & QA

The continuous testing process reduces risks. Automatic tests ensure that no bugs will be implemented in production. We implement testing tools in our workflow to ensure the best development quality for your software.

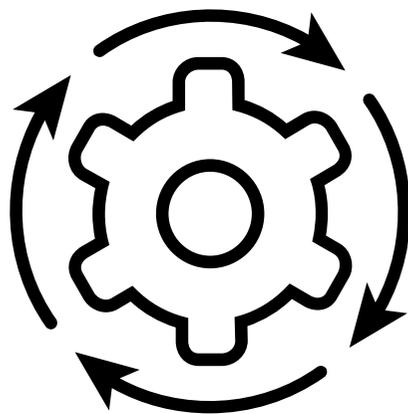

RELEASE

If our code has passed the testing (continuous integration) process and is ready to be deployed.

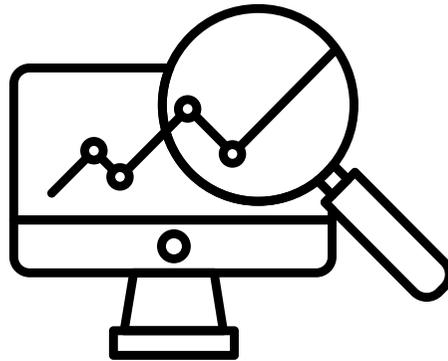

DEPLOY

Our operational team is deploying the new feature in production. But as automation it is one of our principles, it is necessary to set up continuous deployment.

OPERATE/CONFIGURE

We maintain a scalable infrastructure, infrastructure as code, and check security issues and log management.

MONITOR

Monitoring is an important step as it allows you to fix incidents faster and create a better experience for your end-user.

PRODUCTS

Introducing **Pratham Business Suite**, which is a completely customizable retail solution with a simple (UI) User Interface that increases productivity and monitors real-time data.

This industry-leading, next-generation retail chain solution is robust, reliable, and has all the essential features you need to run your business efficiently.

Water Leak Detection

Professional Plumbing Service for Water Leak Repair

In the course of time, a leaking water line can cause significant damage to the structure of a building or lead to other hazards such as mold growth.

A wet patch on your wall or ground can be a sign of a broken water pipe. If you notice this kind of damage, it's best to get it repaired as soon as possible so that the problem doesn't worsen.

If you do not fix water leaks in your home, they can cause severe problems such as mold growth and structural damage.

Alternatively, for a super quick fix, you can use a rubber and hose clamp to give you some time before you can call a plumber out to make the fix.

If you notice a leak from the bottom of a toilet, and you're sure it's from the base, then make sure to stop using the toilet. The leaking water will be dirty water from the toilet bowl. You'll need disinfectant to hand when clearing up from the leak and you do not want to damage the floor or ceiling underneath with unhealthy water.

If you suspect that there is a leak in your home or business building, call a professional plumber immediately to assess the situation. We are here to assist you with the quick response time and you will get definitely a best, better service from Oncall Plumber every time.

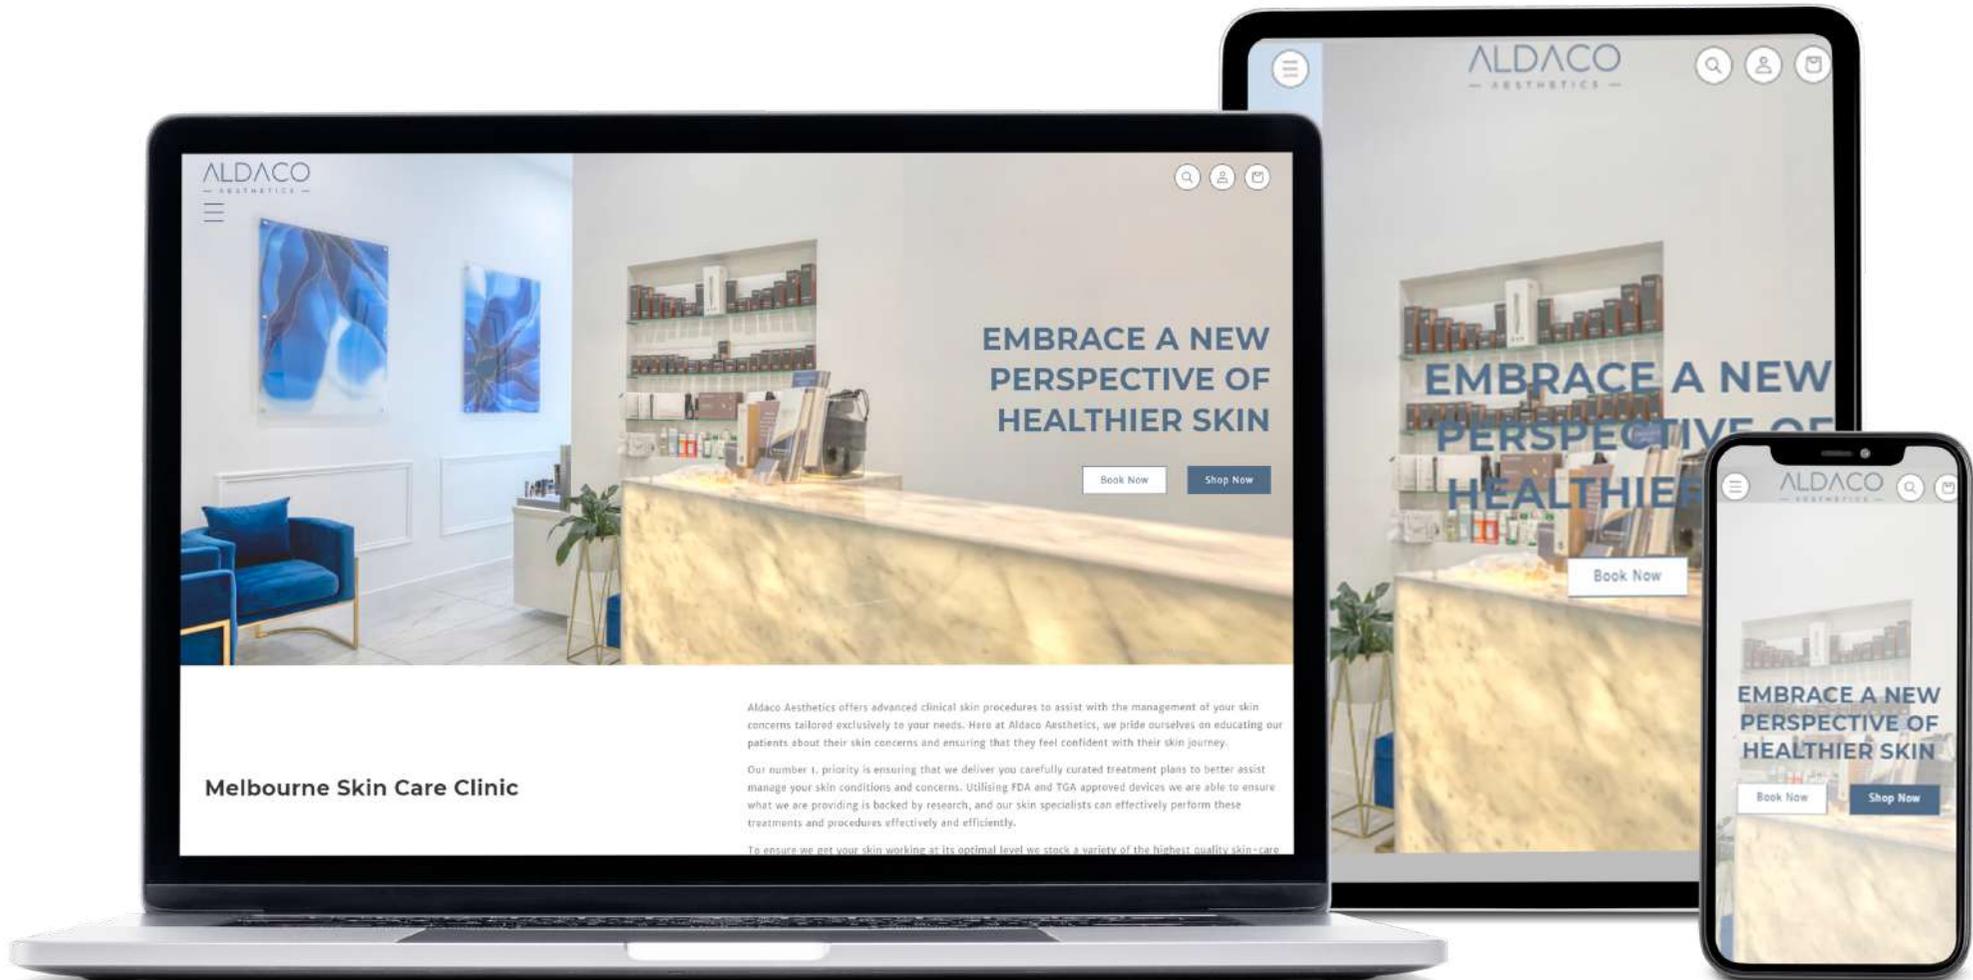

Leak Detection M

- ▶ Water bills are higher than usual
- ▶ Lower water pressure
- ▶ A leaking irrigation system
- ▶ Sounds that indicate leaks
- ▶ Wet patches
